

Ditch 106,
South of Pool 2

Ditch 111,
North of
Duck Creek

Water is a powerful force. It can erode and transport sediment a long way. Part of Little River Drainage District's (LRDD) responsibility is to maintain their ditches to ensure proper drainage. Sedimentation from the surrounding land requires periodic dredging. Currently, LRRD has been cleaning out Ditch 111 and 106, which transport water to and through Duck Creek.
